                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  US-08-565-684B-130

Sequence 130, Application US/08585684B

Patent No. 5877021

GENERAL INFORMATION:

APPLICANT: Jarvis, Thale

APPLICANT: Jarvis, Thale

APPLICANT: McSwiggen, James

TITLE OF INVENTION: INDUCTION OF GRAPT TOLERANCE

TITLE OF INVENTION: INDUCTION OF GRAPT TOLERANCE

TITLE OF INVENTION: AND REVERSAL OF IMMUNE RESPONSES

NUMBER OF SEQUENCES: 2751

CORRESPONDENCE ADDRESS:

ADDRESSEE: Lyon & Lyon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      100.0%; Score 7; DB 2; Length 15; 100.0%; Pred. Patent No. 6316561

GENERAL INFORMATION:
APPLICANT: Grandgenett, Duane P.
TITLE OF INVENTION: Method for Analyzing Concerted Integration of DNA Donor
TITLE OF INVENTION: Molecules into Target DNA and the Enzymes that Perform
TITLE OF INVENTION: Molecules into Target DNA and the Enzymes that Perform
TITLE OF INVENTION: UNBERS: US/09/253,977A
FILE REPERENCE: 16153-8244

Sequence 7, Application US/09486623C

Patent No. 6734161

GENERAL INFORMATION:
APPLICANT: Nielsen, Peter E.
TITLE OF INVENTION: Peptide Nucleic Acids Having Antibacterial Activity
TITLE OF INVENTION: Peptide Nucleic Acids Having Antibacterial Activity
TITLE OF INVENTION: Poptide Nucleic Acids Having Antibacterial Activity
CURRENT APPLICATION NUMBER: US/09/486,623C
CURRENT FILING DATE: 2000-07-06
PRIOR APPLICATION NUMBER: 08/932,140
PRIOR FILING DATE: 1997-09-16

NUMBER OF SEQ ID NOS: 30

SOFTWARRE: Patentin version 3.2

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      0; Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 813, Application US/08758306

Patent No. 5807743

GENERAL INFORMATION:
APPLICANT: Stinchcomb, Dan T.
APPLICANT: McSwiggen, James A.
TITLE OF INVENTION: TREATMENT FOR THE
TITLE OF INVENTION: INTERLEUKIN-2 RECEPTOR
TITLE OF INVENTION: INTERLEUKIN-2 RECEPTOR
TITLE OF INVENTION: GAMMA-CHAIN EXPRESSION
NUMBER OF SEQUENCES: 1379

CORRESPONDENCE ADDRESS:
ADDRESSER: Lyon & Lyon
ADDRESSER: Lyon & Lyon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          0; Mismatches

Sequence 33, Application US/09063450
Patent No. 61097706
GENERAL INFORMATION:
MATICANT: Gene Logic, Inc.
TITLE OF INVENTION: Method and System for Computationally Identifying
TITLE OF INVENTION: Clusters Within a Set of Sequences
TITLE OF INVENTION: UNMER: US/09/063,450
CURRENT APPLICATION UNMER: US/09/063,450
CURRENT PILING DATE: 1998-04-21
NUMBER OF SEQ ID NOS: 38
SOGTWARE: Patentin Ver. 2.1
SEQ ID NO 33
LENGTH: 10
